

1. Three Main Layers of Software Architecture

1. **Presentation Layer (UI Layer)** – Handles user interaction and displays information to users.
 2. **Business Logic Layer** – Processes data and implements the application's rules and functionality.
 3. **Data Layer (Database Layer)** – Stores, retrieves, and manages data for the application.
-

2. Define Client and Server with a Real-Life Example

- **Client:** A device or application that requests services or data from another system.
- **Server:** A computer or system that provides services or data to clients.

Example: When you open a website in your browser, the browser is the **client**, and the website's hosting computer is the **server**.

3. Two Differences Each Between Desktop Apps, Web Apps, and Mobile Apps

Feature	Desktop Apps	Web Apps	Mobile Apps
Installation	Must be installed on a computer	Runs in a web browser, no installation required	Installed from an app store
Platform	Usually works on specific operating systems	Works on any device with a browser	Designed for smartphones and tablets

4. Name Any 3 Databases and Mention Whether Each is SQL or NoSQL

1. MySQL – **SQL**
2. PostgreSQL – **SQL**
3. MongoDB – **NoSQL**
